(54) Title: IMPROVED CROSSLINKED ENZYME AGGREGATES

(57) **Abstract:** Described is a method for the preparation of crosslinked enzyme aggregates, comprising enzyme molecules being as-
sociated with an enzyme activity-enhancing agent, the enzyme activity-enhancing agent interacting with the said enzyme molecules,
comprising the steps of: A - providing a plurality of enzyme molecules, B - aggregating the enzyme molecules in a liquid medium,
by means of addition of a precipitating agent, C - crosslinking the aggregated enzyme molecules to one another by providing a
crosslinking agent in the liquid medium, the method comprising, during or between steps A, B or C, the step of adding an enzyme
activity-enhancing agent and allowing the enzyme molecules to become and to remain associated with the enzyme activity-enhanc-
ing agent. The resulting CLEA are advantageous due to increase in activity, their suitability for recycle, enhanced stability and low
requirements for additional enzyme activity-enhancing agent. Further, crosslinked enzyme aggregates are described, comprising an
enzyme activity-enhancing agent associated therewith.
